Travancore Analytics

Your Software Product
Development Partner
~Offshore and Onshore

TEAM-TA

We are a boutique software development services company working with customers worldwide.

Instituted in **2007**, our collaborative engagement approach focuses on delivering tangible business benefits to our customers. **Innovation, diligence** and **excellence** are our watchwords to guarantee customer and business satisfaction. We aren't afraid of a challenge and we love to deliver value to our customers.

Our Mission

To excel in the art of providing solutions with a rich and tailored customer experience.

I have worked with Travancore over the past 3 years and have referred numerous colleagues to them. They're partners in the truest sense of the word.

Fred Knowles

The simulation software developed by TA has added great value to our business. Moving forward, we hope to expand and strengthen our business relation with TA.

Kawabata K

As we move into additional Analytics projects requiring data integration, I am buoyed by the knowledge that in Travancore Analytics, I have a partner I can trust.

David Bose

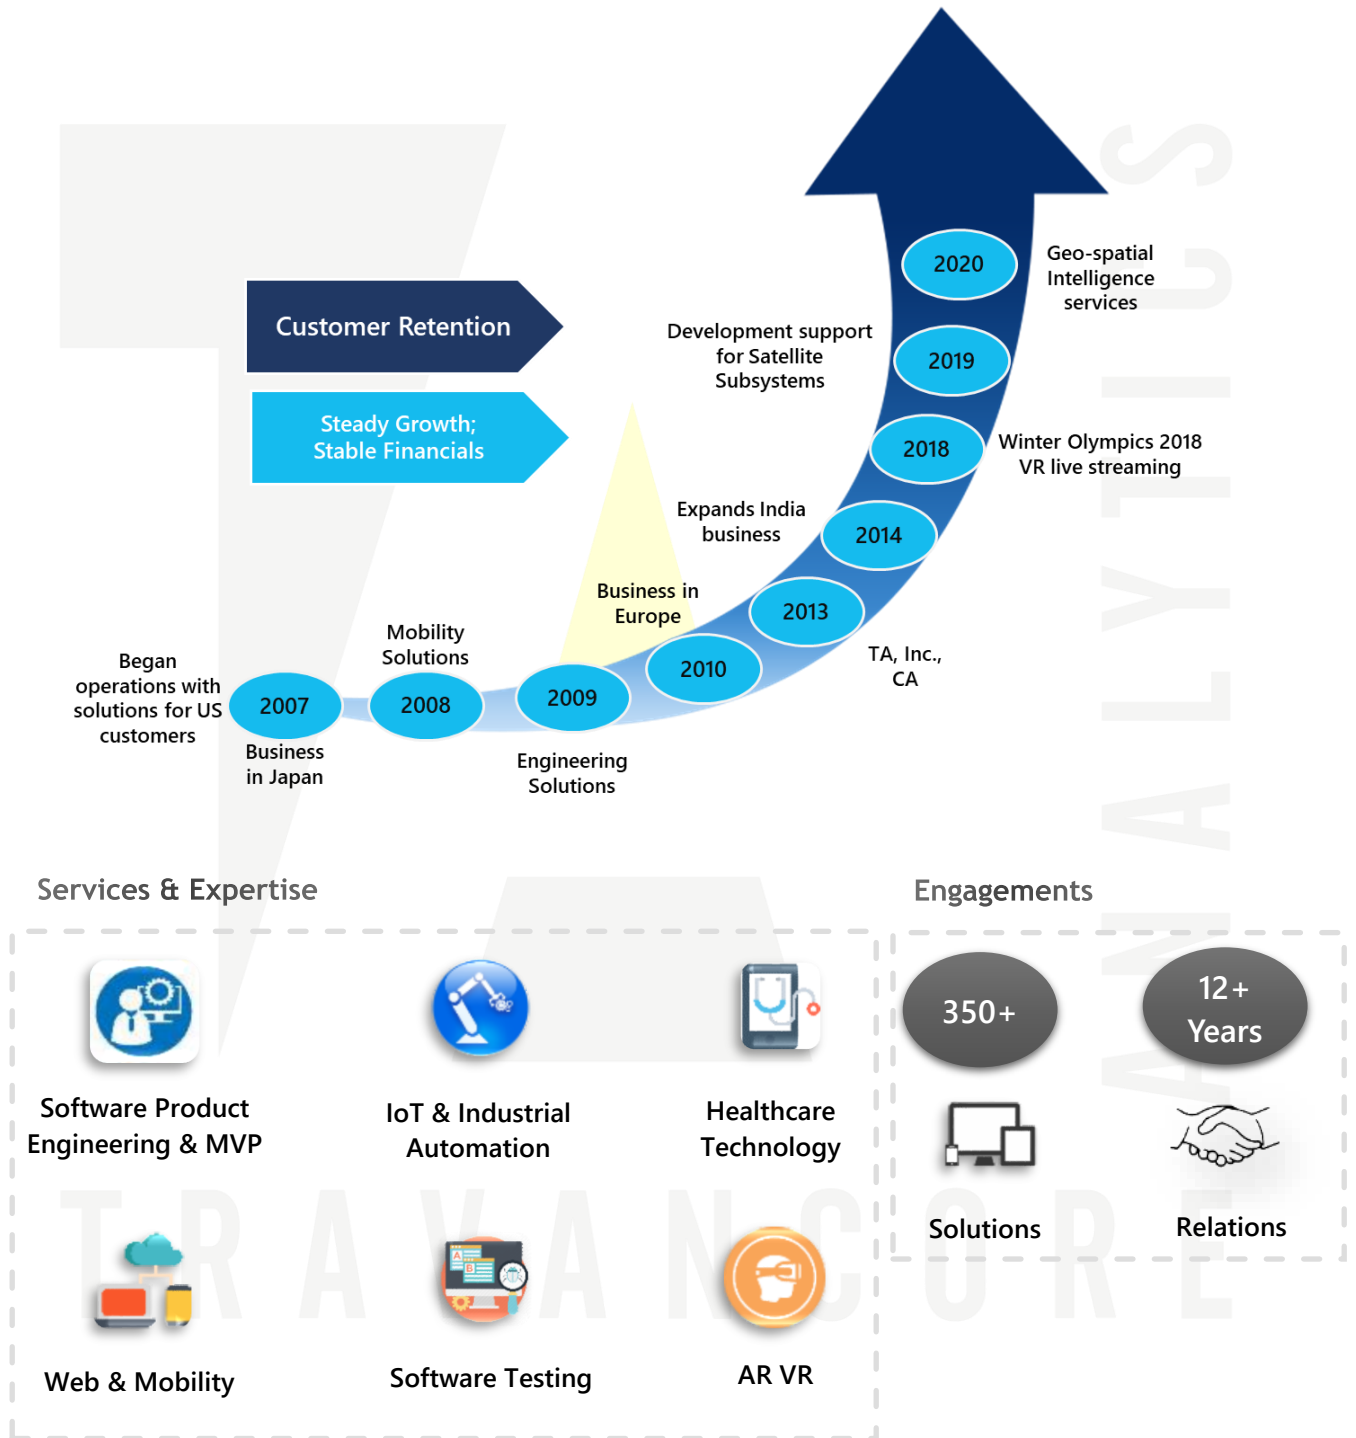

Our company presents a challenging development scenario because our apps are designed for people who are visually impaired. Throughout our association, TA has provided knowledge and resources to support our specific needs.

Kim Casey

We value our relationship with Travancore Analytics. They have proven themselves to be capable and reliable partners in numerous projects. Their ability to code in many environments gives us the confidence that we will be able to handle any business opportunity that comes our way.

Santhosh Joseph

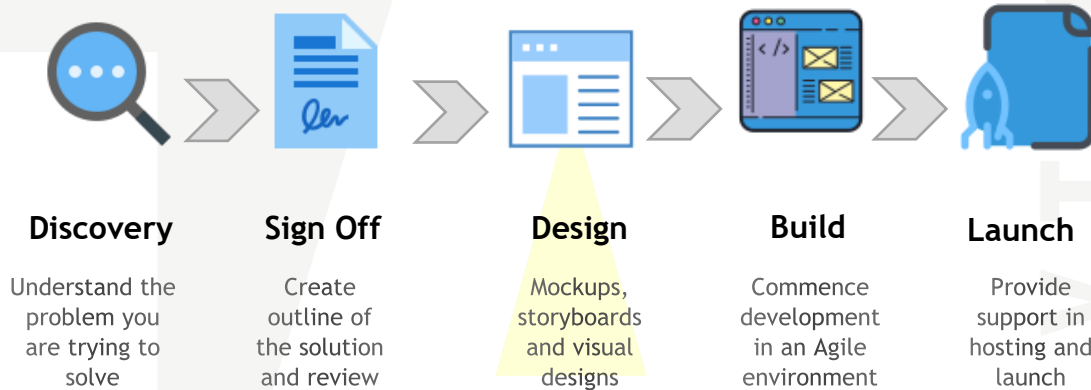

TA: Highlights

Services:

Minimum Viable Product (MVP) Build

As your trusted partner, we work with your playbook or you can leverage our experience to get it done. We ensure that together we adhere to the key objective of building the core of your product only. A basic MVP allows you to test early with your customers. It helps to make course corrections early on and also help you save money.

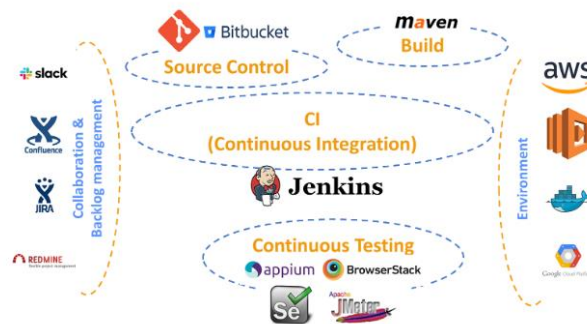

Software Product Engineering

We work with you to understand your near term requirements as well as longer term development plans. We then prepare a mutually agreeable plan using Agile principles. We use best in class Agile and DevOps practices to build your product faster in line with your market needs.

Product Development and Maintenance:

We work with the product owner and product backlog to understand the priorities as we do the sprint planning and manage the sprint backlog. Our sprint team consists of a dedicated Project Manager, Technical Architect, Developers, Graphic Designers and QA members.

We support your front-line technical support and customer success teams to implement feature requests and bug fixes, enabling you to be responsive to customer requirements.

Software Testing

We provide independent testing and employ test automation frameworks to help you increase your deployment frequency. We work with you in the following ways to help you in your mission to reduce failure rate while increasing deployment frequency.

Two Level Regression Testing:

We work with your development team to do iterative regression testing as part of each sprint. This is followed by a complete or full regression testing prior to major release cycles.

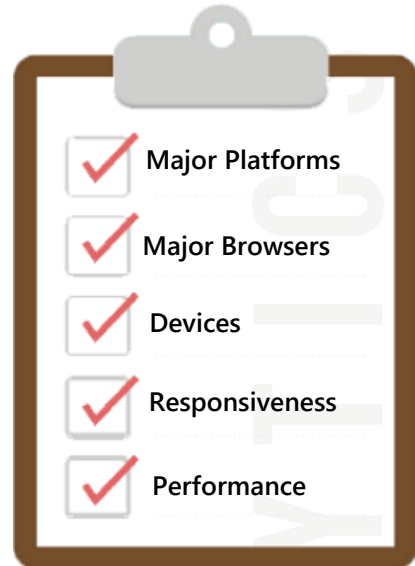

Web &
Mobility

AR VR

REST API Web
Services

Suggested for: when the requirement is to support a monthly or longer deployment frequency.

Automated Regression Testing:

We work with you to build the test suite and our automation engineers automate it using our custom framework. This approach once implemented helps reduce the testing cycle time from days to hours.

Suggested for: products already launched and attained some stability.
